

DTS RED TEAMING SERVICE

One of the biggest challenges for any company is to gain transparency and clarity about its own explicit security deficits. Only in this way is it possible to check whether all security measures are intact and whether they offer sufficient protection. When it comes to the question "Is your company's resilience ensured in the long term?", we at DTS are absolute experts.

With our unique DTS Red Teaming Service, we offer you continuous and individual cybersecurity assessments in which our experienced and certified IT experts slip into the role of an attacker. By simulating realistic and highly topical attacks, your company is continuously put to the test in order to uncover actual security gaps. Based on these continuous security analyses, a clear cybersecurity roadmap can be developed to significantly improve cybersecurity.

» DTS RED TEAMING INCLUDES:

- Monthly/quarterly engagements with individual assessment modules
- Individual testing depending on the maturity level of the customer
- Quarterly coordination of upcoming test cases & their scope for the next cycle
- Implementation based on the MITRE ATT&CK framework
- Reporting platform with specific recommendations for action & re-testing options
- Execution by certified cyber security specialists
- Secure access with DTS Identity Management & multifactor authentication
- Provision as a DTS Managed Service from the German, certified DTS Cloud

The DTS Cyber Security Researchers carry out the security testing individually for the existing IT environment in varying depth.

Security testing is established as an OODA (observe-orient-decide-act) loop process in order to adapt the assessments individually to the corresponding security maturity levels in each cycle.
