

A HOLISTIC AI STACK. ONE PARTNER.

Many providers offer only one model. We provide you with a customized solution: From the GPUs in our own certified data centers in Germany, through the integration of your data, to the finished, fully operational AI solution. You decide what you really need.

AT A GLANCE

- Two in-house next-gen data centers – certified & operated in Germany
- Full cost control: Transparent, predictable pricing – optional token-independent with a fixed budget
- 24/7 managed services: “Round-the-clock” operation instead of operational risk
- Security by design – from the “Home of IT Security”
- Legally compliant environment for DORA, the EU AI ACT & the GDPR – comprehensively documented
- Protecting your intellectual property: Documents, prompts & results do not train third-party models
- Reliable model availability – no models that are discontinued overnight
- Integration with ERP, CRM, DMS & line-of-business applications; RAG powered by your corporate knowledge
- One contract, one partner: Infrastructure, platform, development & operations all from a single source
- Ready for use from day one – you focus on your use cases

OUR RANGE OF SERVICES

No “either/or” – it’s a modular system. Whether you “just” want to access powerful computing power, integrate individual AI features into your own products or rely entirely on us for your AI needs: Each level builds on the one below it. Because we master all three ourselves, there’s no friction between infrastructure, platform and solution – no patchwork of vendors on your end.

EVEN FOR TECH-TEAMS

Building it yourself? Startups rely on powerful GPUs and LLMs via API – without hyperscaler lock-in. IT departments rely on RAG, data integration and specialized APIs as ready-made building blocks.

PRACTICAL EXAMPLES

- **Knowledge & search:** The RAG assistant answers questions from contracts, manuals & project files – with source citations, all within our German data centers
- **Processes & automation:** Incoming invoices, purchase orders & support requests are classified, extracted & forwarded to your line-of-business systems
- **Reports & analyses:** Management reports, project status updates or draft quotes at the click of a button – in your own corporate tone
- **Custom solutions:** From departmental co-pilots to AI in the production environment

OUR APPROACH

1. **Use case workshop:** Identify processes with the greatest leverage; assess feasibility, data availability & cost-effectiveness
2. **Pilot:** A targeted pilot on a sovereign infrastructure – using your real data
3. **Integration:** Embedding into your systems & processes – including permissions, interfaces & training for your teams
4. **Operation & expansion:** Operate, monitor, continuously improve – and expand step by step to include new use cases

FULL SOLUTION

All-round AI service: Consulting, rollout, integration & 24/7 use – turnkey solution

PLATFORM

AI features & data connection: RAG with your knowledge, ERP/CRM/DMS, special APIs

FOUNDATION

Sovereign AI infrastructure: GPU hosting & LLM providing from our own data centers in Germany
