

DTS COCKPIT:

YOUR SECURITY OPERATIONS PLATFORM — STEP BY STEP

The threat landscape is evolving faster than any single team can keep up with: more attack surfaces due to the cloud and hybrid work, stricter regulations like NIS-2 and DORA, attackers striking in minutes instead of days – all while facing a shortage of skilled personnel and fragmented tools. We've taken this to heart and developed a modular model for the DTS Cockpit: clearly defined building blocks that let you assemble exactly the platform you need. Other providers sell you a ready-made service or yet another tool. The DTS Cockpit, on the other hand, gives you a foundation that belongs to you and grows with you – from self-managed operations to fully managed defense. Expansion happens seamlessly, without having to rebuild anything and without hidden costs.

THE KEY BENEFITS

- **One foundation, your way:** Build your platform using exactly the building blocks you need – from self-managed operations to fully managed security. Scale up at any time, seamlessly and without having to rebuild.
- **Confidently based in Germany:** German cloud, EU data sovereignty, NIS-2 and DORA compliant – security that meets regulatory requirements from the start
- **Full cost transparency:** clear module pricing, no hidden costs – your budget remains predictable
