# EMAIL SECURITY

Email remains at the heart of business operations—and, at the same time, the most common entry point for cyberattacks. With DTS Email Security, you get comprehensive protection against malware, phishing, Business Email Compromise (BEC) and a wide range of targeted threats. Advanced Threat Protection detects sophisticated attacks such as ransomware, zero-day threats, polymorphic malware and manipulated attachments and URLs at an early stage, analyzes them in a sandbox environment and blocks them before they reach your inbox.

This European solution is operated entirely in German DTS data centers. All security-relevant data remains within the EU and is subject to the strictest European data protection and compliance requirements – this guarantees maximum data sovereignty, high security standards and a reliable legal framework.

- Instant protection against malware, phishing, BEC, ransomware and zero-day threats
- AI-powered threat detection – known and unknown attacks
- Real-time URL scanning for secure link verification
- Data remains in the EU – full compliance, data sovereignty
- Automated email analysis in a sandbox
- Easy integration with Microsoft 365 and other platforms
- Managed service: 9/5 support, automatic updates and best-practice policies
- Hosted from certified German DTS data centers

## SEAMLESS IT SECURITY FOR MODERN BUSINESS COMMUNICATIONS

DTS Email Security not only protects against external threats but also detects compromised accounts and checks outgoing emails to prevent data loss and safeguard the company's reputation. The solution supports established authentication standards such as SPF, DKIM and DMARC, reduces bulk emails through graymail filtering and analyzes outgoing messages for reputation and DLP-like controls.

Implementation is quick and straightforward. Thanks to a scalable, cloud-based architecture, the solution is equally suitable for companies of all sizes. Centralized, efficient management and seamless integration with Microsoft 365 simplify day-to-day operations while also raising employees' security awareness.

## DUAL-LAYER-APPROACH

The Email-Security-Platform offers pre- and post-delivery protection, covering the entire lifecycle.

**GATEWAY**  
MX Based

### Secure Email Gateway stops threats before they reach your inbox

Block complex threats at the network edge before they reach your inbox

**365**  
API Based

### API-based post-delivery detection identifies threats after delivery

Detect complex threats that bypass Microsoft security measures with fully integrated, API-based protection

**UNIFIED**  
MX & API Based

### Comprehensive Protection

A complete solution for network and email security

## DTS MANAGED SERVICES

Operating your own IT security solutions always requires additional resources. At DTS, we support you across the entire spectrum of IT security. We provide you with the solution from our certified German data centers, handle installation, 24/7 operation, the deployment of updates and fixes, maintenance, and first- and second-level support (9/5). Our experts minimize your workload. Of course, we work with you to tailor the optimal solution to your needs. Benefit from the unique combination of state-of-the-art IT security solutions and DTS Managed Services.
