HOSTED EMAIL

HOSTED EMAIL

In the business world, email is a fundamental component of most corporate processes. In this environment, demands for availability, security and data protection are rising rapidly, while the geopolitical situation continues to escalate. Companies need a solution that operates reliably, allows employees to access their mailboxes from anywhere and guarantees digital sovereignty.

DTS Hosted Email was developed specifically for companies that want to make their email communication modern, secure and efficient. Instead of operating their own mail servers, they use a scalable hosted solution that integrates seamlessly into existing work environments. Their mailboxes are accessible worldwide and protected by effective safeguards against spam and phishing. This simplifies the transition from existing systems and ensures user acceptance through familiar workflows.

Another key advantage is technological and digital sovereignty: All hosted servers are operated in DTS's own certified data centers in Germany. This allows you to benefit from GDPR-compliant data storage, high reliability, and professionally monitored operations.

Thanks to comprehensive protocol support and convenient access options, your employees can continue working flexibly from anywhere using a desktop, laptop, tablet or smartphone. File attachments, email status, contacts, calendars and other content remain synchronized across devices.

Access is conveniently available via existing webmail solutions or email clients. Thanks to Autoconfig & Autodiscover and support for JMAP, IMAP4, POP3, SMTP, CalDAV, CardDAV and WebDAV, the solution can be flexibly integrated into existing applications and devices. Continuous monitoring, scheduled patch management and first- & second-level support also ensure stable and secure operation.

- Professional hosted email solution
- GDPR-compliant data storage in certified data centers in Germany
- Optional storage expansion for the entire user pool
- Protection against spam and phishing
- Synchronization of emails, calendars, contacts, and files
- First- and second-level support
