

DTS Security Awareness Training

Security Awareness Training

Because more than 90 % of all cyber attacks begin with an email, the security of your data stands and falls with attentive end users. Current solutions include technologies to detect and block malicious emails. But you can reduce the chance of successful phishing or ransomware attacks by yourself through effective threat simulation and training.

Proofpoint's Security Awareness Training increases security awareness and changes user behavior. This reduces successful cyber attacks and prevents data loss.

- optimization of user behavior
- reduction of risks related to phishing and other cyber attacks
- prioritizing and improving the response to incidents
- unlimited platform use
- multilingual support
- real-time reporting
- avoidance of data breaches
- DTS Managed Security Awareness

Assessment

Learn which employees are exposed to phishing and spear-phishing attacks using **ThreatSim**. Get more than 500 different phishing templates in 30 languages and 13 categories. You can also assess users against multiple threats, such as malicious attachments or embedded links.

Cyberstrength is a powerful web-based survey tool that uses existing or custom questions to identify areas where your employees are exposed to attacks. You do not need to run a simulated attack to do this.

Training

Use more than 35 different topic modules to teach your employees in a playful way how to recognize and avoid many different phishing and other cyber attacks. The training is available on demand and each module can be completed in 5 to 15 minutes, minimizing the disruption to daily work.

Reduction

The **PhishAlarm** email client add-in is included with **ThreatSim** so that your employees can report suspicious messages with one click.

PhishAlarm Analyzer prioritizes reported messages and improves the response to incidents. It allows administrators to quickly review important details and helps you make decisions and take action.

Evaluation

The results of the training and phishing simulations can be evaluated in detail. It is also possible to make the data anonymous.

The Security Awareness Training with its unique methodology offers a continuous training opportunity. The procedure, which includes a recurring cycle of assessment, training, reduction and evaluation, has been proven to lead to a decrease in successful phishing and cyber attacks.

DTS Managed Security Awareness

Benefit from the additional DTS managed service in addition to the security awareness solution at your site. This includes German support via DTS 9/5 business day hotline. We also conduct an annual on-site assessment with you, including goal definition, creation of a learning plan, analysis of the learning path and evaluation of all users. Quarterly elements are also part of our service. At the year fix, module-based assessments are created, adapted and evaluated. In addition, concrete phishing attacks can be played through as training for specific target groups. The awareness newsletter provides you with learning plan-based mailing templates on jointly defined or current topics as well as flyers, videos, etc. Use our DTS managed service and complete the Security Awareness Training for a complete security awareness.
